

# EVAL-001

## Decision

Approved

---

## Observation

The response successfully addressed all components of the user's request by explaining Type 2 diabetes in simple language, describing common symptoms, recommending appropriate lifestyle changes, and identifying situations where medical attention should be sought.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets expected quality standards by providing clear, accurate, and actionable information. It supports a positive user experience while reducing the likelihood of unnecessary follow-up questions.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-002

## Decision

Not Approved

---

## Observation

The response successfully explained what an emergency fund is and recommended the ideal savings target. However, it did not fully satisfy the user's request, as it provided only two practical saving strategies instead of three and failed to mention the two common mistakes people make while building an emergency fund.

---

## Issue Type

Incomplete Response

---

## Severity

Moderate

---

## Business Impact

The response does not meet expected quality standards due to incomplete instruction fulfillment. Such responses may reduce user confidence, increase follow-up interactions, and negatively affect the perceived reliability of the AI system if the pattern persists.

---

## Hypothesis

The model may have difficulty consistently processing prompts containing multiple instructions, resulting in partial completion of the requested information.

---

## Recommendation

Review the model's instruction-following behavior for prompts containing multiple requests. Investigate response generation mechanisms to improve response completeness and ensure that all requested components are addressed before the final response is generated.

# EVAL-003

## Decision

Approved

---

## Observation

The response successfully addressed all components of the user's request. It clearly explained what an over is, described how a batsman gets dismissed, listed four common methods of dismissal (Bowled, Caught, Run Out, and Leg Before Wicket), and accurately explained what a no-ball is. The information is factually accurate, well-structured, and presented in a beginner-friendly manner.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by providing accurate, complete, and easy-to-understand information. It effectively answers all requested components, promotes a positive user experience, and minimizes the likelihood of confusion or unnecessary follow-up questions.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-004

## Decision

Approved

---

## Observation

The response is technically accurate, concise, and well-structured. It successfully addressed all components of the user's request by explaining the difference between SSD and HDD storage, recommending the most suitable option for most students, providing two advantages of SSDs, and identifying a situation where an HDD remains a reasonable choice. The information is factually accurate and appropriate for a first-time laptop buyer.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by providing accurate, complete, and easy-to-understand information. It effectively fulfills all user instructions, supports informed decision-making, and promotes a positive user experience.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-005

## Decision

Approved

---

## Observation

The response successfully addressed all components of the user's request. It clearly explained what dietary fiber is, described two health benefits of consuming adequate fiber, recommended three common high-fiber foods, and identified one possible side effect of increasing fiber intake too quickly. The information is factually accurate, balanced, and appropriate for a general audience.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by providing accurate, complete, and easy-to-understand information. It fulfills all user instructions, supports informed health decisions, and contributes to a positive user experience.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-006

## Decision

Approved

---

## Observation

The response successfully satisfied all components and constraints specified in the user's prompt. It recommended three popular attractions in Kyoto, suggested one local specialty food, and provided two practical travel tips. Additionally, the response is factually accurate, clearly structured, and remains within the user's requested limit of fewer than 150 words.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by accurately fulfilling all user instructions and constraints. Its completeness, factual accuracy, and adherence to the specified word limit contribute to a positive user experience and reinforce the model's reliability.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-007

## Decision

Approved

---

## Observation

The response successfully addressed all components of the user's request. It clearly explained what two-factor authentication (2FA) is, described two key benefits of enabling it, recommended three strong password practices, and provided an appropriate immediate action to take if a password is believed to be compromised. The information is factually accurate, practical, and easy to understand.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by providing accurate, practical, and actionable cybersecurity guidance. It fulfills all requested components, supports secure online practices, and contributes to a positive user experience.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-008

## Decision

Approved

---

## Observation

The response successfully addressed all components of the user's request. It clearly explained what recycling is, described two environmental benefits, recommended three commonly recyclable everyday items, and provided practical guidance on what should generally be avoided in household recycling bins. The information is factually accurate, easy to understand, and appropriate for a general audience.

---

## Issue Type

None

---

## Severity

N/A

---

## Business Impact

The response meets the expected quality standards by providing accurate, complete, and actionable information. It fulfills all user instructions, promotes environmentally responsible practices, and contributes to a positive user experience through its clarity and practical guidance.

---

## Hypothesis

N/A

---

## Recommendation

No action required.

# EVAL-009

## Decision

Not Approved

---

## Observation

The response successfully explained what a credit score is, recommended three ways to maintain a good credit score, and correctly identified a common misconception about credit scores. However, it did not fully satisfy the user's request because it listed two factors affecting a credit score without describing how those factors influence the score, resulting in an incomplete response.

---

## Issue Type

Incomplete Response

---

## Severity

Moderate

---

## Business Impact

The response does not meet the expected quality standards due to incomplete instruction fulfillment. While the information provided is factually accurate, failing to describe the requested factors may reduce user understanding and lead to follow-up questions, affecting the perceived completeness and reliability of the model.

---

## Hypothesis

The model may have partially followed the prompt by identifying the requested factors but failed to generate the accompanying explanations, indicating a potential weakness in handling prompts that require both identification and description.

---

## Recommendation

Review the model's instruction-following behavior to ensure that prompts requesting explanations or descriptions are fully satisfied rather than being answered with lists alone. Strengthen response generation checks to verify that all requested components are completed before the final response is returned.

# EVAL-010

## Decision

Not Approved

---

## Observation

The response addressed all components of the user's request but did not fully satisfy the expected quality standard. It listed two signs of dehydration without describing them as requested, resulting in incomplete instruction fulfillment. Additionally, it contained a factual error by incorrectly stating that coffee does not contribute to daily fluid intake because caffeine always causes more water loss than the water it contains.

---

## Issue Type

Factual Inaccuracy and Incomplete response

---

## Severity

Moderate

---

## Business Impact

The response does not meet the expected quality standards due to both incomplete instruction fulfillment and incorrect health information. The factual error may misinform users about hydration, while the incomplete descriptions reduce the educational value of the response, potentially affecting user trust and increasing follow-up questions.

---

## Hypothesis

The model may have partially followed the prompt by listing requested items without providing the required descriptions. The incorrect statement regarding coffee suggests a possible factual grounding or response generation issue, leading to an overgeneralized and inaccurate conclusion.

---

## Recommendation

Review the model's instruction-following behavior to ensure that prompts requesting descriptions are fully satisfied. Strengthen factual validation mechanisms for health-related responses to reduce the likelihood of confidently presenting inaccurate information and improve overall response reliability.
